SUMMARY

Backend Developer (Go/Golang, Node.js, Express.js, MySQL) with 2 shipped personal projects and hands-on experience in API development, database management, and backend system integration from Hacktiv8's Backend Golang program. Former physical education teacher and barista with experience in teaching, customer service, and daily operations — brings strong communication, problem-solving, adaptability, and teamwork skills to engineering teams.

SKILLS

Language: Golang
Front End: React JS, HTML & CSS
Back End: Node JS, Express JS, Golang, MySQL

PROJECTS

Jatinusa **Sept, 2026**

A full-stack furniture e-commerce platform designed for teak furniture businesses to showcase products, manage inventory, and provide customers with an interactive shopping and price estimation experience.

- *Developed a responsive furniture catalog with product browsing, detailed product pages, and an intuitive user interface using HTML, CSS, and JavaScript.*
- *Built a backend system using Node.js and Express.js, integrated with MySQL to support product management, database operations, and dynamic product data retrieval.*
- *Implemented user authentication, shopping cart functionality, product CRUD operations, and a furniture price estimation feature to streamline the customer shopping experience.*

Tech stack: *HTML5, CSS3, JavaScript (ES6+), Bootstrap 5, LocalStorage, Git, GitHub.*

GitHub: *https://github.com/dazo-rgb/JATINUSA-WEB*

dazo-musicyt **Oct, 2026**

A lightweight, responsive web-based music streaming platform that allows users to search and play YouTube music through a distraction-free audio player, featuring customizable audio equalization, synchronized lyrics, and personalized music management.

- Developed a responsive music player interface with YouTube music search, audio playback, interactive controls, and dynamic album artwork using HTML5, CSS3, Bootstrap 5, and JavaScript.
- Built a backend system using Go (Golang) with REST API endpoints for music search, audio stream extraction, and audio proxy handling, integrating yt-dlp for retrieving direct audio streams.
- Implemented a customizable audio equalizer using the Web Audio API, synchronized lyrics, playback queue management, shuffle and repeat modes, custom playlists, liked songs, and playback history using LocalStorage.

Tech stack: *Go (Golang), Rust, WebAssembly (WASM), HTML5, CSS3, JavaScript (ES6+), Bootstrap 5, Web Audio API, yt-dlp, LocalStorage, REST API, Docker, Git, GitHub.*
